Nebraska Emerald Ash Borer Response Plan
First approved: March 21, 2008
Updated: May 4, 2009

EXECUTIVE SUMMARY

- Emerald ash borer (EAB) infests and kills all types of ash trees (*Fraxinus* spp.) regardless of their health, condition, size or age.
- EAB was first detected in 2002 in a suburb of Detroit, Michigan.
- As of November 2008, EAB has been found in 10 states and two Canadian provinces (Illinois, Indiana, Maryland, Michigan, Missouri, Ohio, Pennsylvania, Virginia, West Virginia, Wisconsin, and Ontario and Quebec, Canada).
- EAB has killed over 30 million ash trees as of 2007 in Michigan, Ohio and Indiana.
- EAB is a very likely threat to Nebraska’s 30 million ash trees.
- The estimated potential impact of EAB just on urban forests in the U.S. is an economic loss of $20 - 60 billion.
- The economic impact just on the City of Lincoln’s urban forest has been estimated at $137,403,770.
  - Loss of annual net environmental, economic, and social benefits: $19.52/tree X 159,861 ash = $3,120,492/year
  - Removal costs of city-owned ash: 31,972 ash X $400 average per removal = $12,788,800
  - Replanting costs of city-owned ash (100% replacement): 31,972 X $280/tree = $8,952,160
  - Removal costs of privately owned ash: 127,889 ash X $600 average per removal = $76,733,400
  - Replanting costs of privately owned ash (100% replacement): 127,889 X $280/tree = $35,808,920
  - Total cost in 2008 dollars: $137,403,770
- The Nebraska Emerald Ash Borer Working Group, representing many state, federal, and local agencies, and professional organizations, was created in 2006 to develop this Nebraska Emerald Ash Borer Response Plan, which serves to coordinate efforts to inform professionals and the public about EAB and will coordinate containment and management efforts when EAB arrives in the state.
- The Nebraska Department of Agriculture conducts EAB firewood inspections.
- The Nebraska Department of Agriculture in cooperation with USDA-APHIS-PPQ sets EAB detection traps at high risk introduction sites as part of the National EAB Survey.
- The Nebraska Forest Service conducts annual EAB surveys in areas at high risk for EAB introduction and produces and distributes EAB detection kits for citizen involvement in EAB monitoring.
- The Nebraska Forest Service, Nebraska Statewide Arboretum, and USDA Natural Resources Conservation Service in Nebraska have adopted policies recommending no ash planting.
- The Nebraska Department of Agriculture and USDA-APHIS-PPQ will take the lead, in cooperation with the Nebraska Forest Service, in planning and implementing actions taken after EAB enters the state.
- Actions taken to contain and manage EAB will include quarantines, removal of ash trees, and possibly treatments of nearby ash trees with approved insecticides.
- Municipalities and landowners of EAB infested areas will be allowed to act under their own local authorities when local ordinances are consistent with quarantine requirements.
PURPOSE AND NEED

The emerald ash borer (EAB) (*Agrilus planipennis* Fairmaire) is a new, significant threat to the urban and rural forests of Nebraska. First identified in 2002 in southeast Michigan, this exotic beetle has destroyed millions of ash trees and is now known to be present in Michigan, Illinois, Indiana, Ohio, Pennsylvania, West Virginia, Maryland, Virginia, Missouri, Wisconsin, and Ontario and Quebec, Canada. State and federal quarantines are in place and involve significant survey, containment, and eradication operations in affected areas.

The difficulty of detecting EAB infestations early in their development has led many times to the movement of EAB into new areas as ash firewood and other ash materials not known to contain EAB are transported. New EAB locations continue to be discovered beyond the main population in southeast Michigan (Table 1). Current efforts against EAB appear to be failing (“Invasive Forest Pests—Lessons Learned from Three Recent Infestations May Aid in Managing Future Efforts,” GAO-06-353, 2006 (Appendix B)), and the insect is expected to spread eventually throughout North America wherever ash is present. EAB has not yet been found in Nebraska, and we can avoid or reduce the severe financial impact it will have on our citizens if we keep the insect out for as long as possible.

### Table 1. Emerald Ash Borer History in North America

<table>
<thead>
<tr>
<th>Date</th>
<th>Event Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>July 2002</td>
<td>EAB is first identified in Detroit, MI.</td>
</tr>
<tr>
<td>October 2002</td>
<td>Confirmed in Windsor, Canada.</td>
</tr>
<tr>
<td>By end of 2002</td>
<td>Michigan quarantined 6 counties, estimated 6,000,000 ash trees killed.</td>
</tr>
<tr>
<td>In 2003</td>
<td>Confirmed in 3 counties in Ohio. EAB was first detected in Fairfax County, Virginia but was successfully eradicated.</td>
</tr>
<tr>
<td>September 2003</td>
<td>An infestation was confirmed in Maryland, and an attempt was made to eradicate it. (It was rediscovered in August 2006.)</td>
</tr>
<tr>
<td>In 2004</td>
<td>Found in two northeastern Indiana counties.</td>
</tr>
<tr>
<td>January 2006</td>
<td>Confirmed near Indianapolis, IN; infestation believed to be 7 years old.</td>
</tr>
<tr>
<td>Early 2006</td>
<td>Indiana declares they will be ceasing eradication efforts and will concentrate on management, the first state to do so.</td>
</tr>
<tr>
<td>June 2006</td>
<td>Confirmed in Kane County, IL, near Chicago.</td>
</tr>
<tr>
<td>August 2006</td>
<td>Confirmed in Maryland three years after the eradication effort.</td>
</tr>
<tr>
<td>June 2007</td>
<td>Confirmed near Pittsburgh, PA, and the infestation appears to be as large as 30 square miles.</td>
</tr>
<tr>
<td>July 2007</td>
<td>Confirmed in Peru, IL.</td>
</tr>
<tr>
<td>August 2007</td>
<td>Illinois drops plans to eradicate EAB and declares it a management issue.</td>
</tr>
<tr>
<td>October 2007</td>
<td>Confirmed in Fayette County, WV, southeast of Charleston.</td>
</tr>
<tr>
<td>In 2007</td>
<td>Thirteen additional infestations were discovered in Illinois. Several were determined to have existed for 5 to 7 years.</td>
</tr>

</table>

The Nebraska Forest Service (NFS) estimates that 26% of public trees in cities in Nebraska are
green ash (*Fraxinus pennsylvanica*), white ash (*F. americana*), and/or black ash (*F. nigra*). In
some communities, green ash comprises over 40% of the public trees. In rural forested areas,
approximately 7% of trees overall are ash according to a recent USDA Forest Service survey, but
up to 60% are ash in some areas (Appendix F). Enhanced surveys are needed and will be done as
funding allows to gain more precise information about Nebraska’s ash resource and allow a
better assessment of the economic impact the borer will have on communities and rural areas.

The Nebraska Department of Agriculture (NDA) has been proactive in preventing EAB
introduction into Nebraska since 2003. Visual surveys of ash nursery stock during nursery dealer
and grower inspections have been and will continue to be conducted by NDA nursery inspectors,
and inspections of firewood dealers have been and will continue to be conducted to determine the
sources of the firewood and to ensure that it is in compliance with all state and federal
quarantines. In addition, since 2006 the NFS has conducted trapping and visual surveys in ash
areas at sites considered to be the highest risk for an EAB introduction in the state. Outreach and
educational materials on EAB have been prepared by NDA, NFS, and USDA-APHIS-PPQ and
are distributed widely to the nursery industry, arboriculture industry, cooperating agencies,
related trade organizations and the general public.

The Nebraska Emerald Ash Borer Working Group was formed in 2006 to develop this response
plan to reduce the likelihood of an EAB introduction into Nebraska and to find, contain, delimit,
and minimize the impact of EAB if it is introduced into the state. Much of this plan was
modeled after regional EAB programs and plans from other states. In particular, this plan closely
follows the EAB response plan produced by Illinois, a state currently dealing with newly
discovered EAB infestations and that was previously successful in controlling another serious
exotic tree pest, the Asian longhorned beetle. This plan is intended to be an evolving one and
will change as new, important information becomes available.
SPECIFIC PLAN DETAILS

1. GENERAL READINESS – to reduce risk, minimize impact, and respond more effectively to a possible infestation of the emerald ash borer (EAB), *Agrilus planipennis*, and to work collaboratively towards overall health and sustainability of the forests, both urban and rural, throughout Nebraska.

A. Establish a network of agencies and organizations that may be affected by EAB into the Nebraska Emerald Ash Borer Working Group. The group is responsible for drafting the response plan and will advise, advocate and lead in the implementation of the plan.

Nebraska EAB Working Group:
- USDA Animal and Plant Health Inspection Service (APHIS) Plant Protection and Quarantine (PPQ)
- Nebraska Department of Agriculture (NDA)
- Nebraska Forest Service (NFS)
- Nebraska Game and Parks Commission (NGPC)
- University of Nebraska-Lincoln (UNL), Department of Entomology
- University of Nebraska-Lincoln, Department of Agronomy and Horticulture
- Nebraska Statewide Arboretum (NSA)
- Nebraska Arborists Association (NAA)
- Nebraska Nursery and Landscape Association (NNLA)
- Lincoln Parks and Recreation, Forestry Department
- Natural Resources Conservation Service (NRCS)
- USDA Forest Service
- Great Plains Tree and Forest Invasives Initiative (GPTFII)

Working Group special teams:

1. Administrative Team – agencies that have, by law, been assigned the responsibility of managing an exotic infestation and have been granted the legal authority to act by the federal, state, or local government; or that have oversight and general supervision in the State of Nebraska for education, management and protection of forest resources. These agencies are responsible for leading the implementation of the response plan and have major roles in the administration and coordination of policies, programs, and staff:
   - NDA
   - USDA APHIS PPQ
   - NFS
   - Affected local governments at sites of infestation (Prior to an EAB infestation, a representative from the City of Lincoln will serve as an advisor on this team.)

2. Core Communication Team – agencies responsible for providing accurate information and updates to the media in the event of an EAB discovery and the eventual management and recovery efforts in Nebraska:
• NDA – primary for discovery and management efforts
• NFS – primary for recovery and restoration efforts
• USDA APHIS PPQ
  • Affected local governments or agencies at sites of infestation

3. Firewood Team – agencies responsible for analyzing the firewood market and finding ways to reduce the risk of EAB importation
   • NDA
   • USDA APHIS PPQ
   • NFS
   • NGPC
   • NAA
   • NNLA
   • GPTFII

4. Surveying Team – agencies responsible for coordinating the surveying and monitoring of ash populations to determine the presence of the emerald ash borer
   • NDA
   • USDA APHIS PPQ
   • NFS
   • NGPC
   • NAA
   • NNLA
   • GPTFII
   • Eventually expand to emergency personnel who have received training

5. Public Education Team – agencies responsible for educating the general public about ash health and EAB
   • NDA
   • USDA APHIS PPQ
   • NFS
   • NGPC
   • UNL Dept. of Entomology
   • UNL Dept. of Agronomy and Horticulture
   • NSA
   • NAA
   • NNLA
   • NRCS
   • GPTFII

6. Wood Utilization Team – agencies responsible for analyzing and facilitating the development of wood product and energy markets for trees removed due to EAB
   • NDA
   • NFS
   • Lincoln Parks and Recreation, Forestry Department
   • NAA
   • GPTFII
B. **Administrative Readiness** – to assure that resources and policies are in place in regulatory agencies that allow the actions described in this plan to occur quickly and unencumbered

1. Preparation of EAB Response Plan [Administrative Team and Working Group]
   a) Administrative Team distributes draft response plan to working group
   b) Working Group discusses plan with constituencies and provides input to final plan
   c) Working Group fosters cooperation among agencies for implementation of the plan

2. Identify resources and needs [Administrative Team]
   a) Identify needs in staffing and technical resources in Administrative Team agencies
      i) Monitoring nursery operations
      ii) Tracking firewood movement
      iii) Surveying
      iv) Risk assessment (inventories)
      v) Education
      vi) Wood market identification and development
   b) Identify sources and securing funding for response activities

3. Take proactive steps to speed administrative processes [Administrative Team]
   a) Analyze NDA procedures to identify streamlining opportunities
   b) Analyze APHIS procedures to identify streamlining opportunities
   c) Communicate EAB status to Nebraska Emergency Management Agency (NEMA)
   d) Encourage communities to examine local administrative processes for streamlining opportunities
   e) Develop Community EAB Management Plan Guidelines and encourage communities to develop plans

4. Educate the media and assure accuracy of information [Core Communications Team]
   a) Issue a press release on the final plan
   b) Coordinate Public Information Officers from Administrative Team
   c) Identify key sources of current information

5. Explore wood waste utilization opportunities to reclaim ash wood residues to their highest possible use should a volume of material suddenly become available [Wood Utilization Team]

C. **Technical Readiness** – to assure that policy decisions, actions, and educational initiatives are guided by the best and most current science

1. Review and distribute up-to-date scientific information related to EAB biology and control to Working Group members, who may share the information with their constituencies [Administrative Team and Working Group]

2. Coordinate with the national EAB plan when one is available [Administrative Team]
3. Operate under any required USDA technical guidelines [Administrative Team]

4. Use scientifically sound guidelines and technology when monitoring for and controlling EAB infestations [Administrative Team]

5. Advocate for continued research for greater understanding of EAB and its control [Working Group]

II. REDUCE RISK OF INFESTATION – to assure that all means of EAB introduction are known and blocked, whenever possible

A. Assess Risk – to determine the size and scope of the ash resource and the severity of a potential EAB infestation

1. Analyze potential sources of EAB importation (i.e., ash logs, firewood and nursery stock from Michigan and other affected areas) [Administrative Team]

2. Assess the scope of the resource at risk (number of ash trees) [Administrative Team]

3. Analyze ash populations to determine high risk areas [Administrative Team]

4. Track the spread of EAB [Administrative Team]

B. Reduce Risk

1. Identify target groups/organizations for outreach [Working Group] [Appendix C]

2. Raise public awareness about the risk from firewood importation [Firewood Team]
   a) Install educational posters at state and private campgrounds, and state and county fairs
   b) Install educational billboards along highways in areas at high risk for firewood importation
   c) Include information about how to report suspected quarantine violations in posters, billboards and other materials
   d) Promote "EAB-free" firewood from reputable firewood dealers and campgrounds

3. Analyze the firewood market and finds ways to reduce the risk of importation [Firewood Team]

4. Survey or inspect firewood dealers [Administrative Team]

5. Initiate trace-back process for firewood transport [Administrative Team]

6. Educate industries about the risk of ash importation [Firewood Team]
a) Educate wood products manufacturers about current quarantines and threats related to the importation of wood materials
b) Educate contractors and municipalities about the importance of knowing the source of ash trees and assure they are NDA inspected
c) Educate garden centers, firewood dealers, and businesses that regularly use firewood, such as in fireplaces and for barbequing, about the risk
d) Reach out to trucking associations to help track movement of ash

7. Inform the Nebraska State Patrol and other appropriate law enforcement agencies about existing ash quarantines and the possibility that ash firewood or other materials could be brought into or carried across Nebraska [Core Communication Team]

8. Continue full and thorough analysis of ash nursery stock movement and effective inspection of current ash stock [Administrative Team]

9. Assure planting selections contribute to a diverse and sustainable urban forest [Working Group]
   a) Educate municipalities and the green industry about the advantages of diversity in plantings
   b) Encourage the use of tree inventories to analyze diversity and guide planting decisions

10. Encourage communities to do preemptive removals of declining and problematic ash to spread removal costs over additional years [Working Group]

11. Seek legislative support to reduce risk and secure funding for prevention, control and recovery [Working Group]
   a) Assure Nebraska’s prevention and control efforts are well funded
   b) Advocate for funding for response activities and proactive ash replacement plantings
   c) Advise federal legislators of the hardship of state required match of federal funds
   d) Identify potential funding mechanisms

III. DETECT INFESTATIONS PROMPTLY – to minimize the spread and improve odds of containing an infestation

A. Survey urban and rural ash populations - to quickly find EAB infestations

1. Survey and monitor ash populations, particularly in high risk areas, to determine the presence of EAB [Survey Team]

2. Enable municipal, commercial green industry, and natural resources professionals to participate in monitoring and reporting in a systematic way [Survey Team]

3. Communicate survey results to stakeholders and the media [Core Communication Team and Working Group]
B. **Educate professionals and the public** with current and accurate information in a targeted manner to aid in the rapid identification of symptoms of an infestation

1. Provide training and outreach based on current information to arborists, nurserymen and other green industry workers to assess ash health and accurately identify EAB [Public Education Team]

2. Educate the general public about ash health and EAB [Public Education Team]
   a) Develop simple educational materials for the general public
   b) Pursue opportunities for speaking, educating, and exhibiting educational displays that include EAB identification

3. Recruit and enable volunteer scouting [Public Education Team]
   a) Promote awareness through the media with regular press releases and public appeals for help in scouting
   b) Prepare kits to support volunteer scouting by both individuals and groups

C. **Coordinate state and national information** to address professional and public inquiries from Nebraska and foster cooperation and communication

1. Have working group members with websites link to USFS, APHIS and Michigan State EAB websites [Working Group]

2. Coordinate with http://www.emeraldashborer.info/to add information about Nebraska and the Great Plains Tree and Forest Invasives Initiative [Core Communication Team]

D. **Guide inquiries and possible sightings** through the following process for the most effective use of resources and quickest response [Public Education Team]

1. Develop a pre-screening checklist to follow when attempting to determine if EAB or an EAB-infested tree has been found, (e.g. assure the suspect tree is an ash, rule out similar but common insects). Indicate in the checklist how people with possible EAB samples could send digital photographs to help in the pre-screening process.

2. Provide the EAB pre-screening checklist to UNL Extension, municipal forestry programs and other professionals to help pre-screen inquiries.

3. If pre-screening rules out other pests and EAB is suspected, contact:
   - Nebraska Department of Agriculture, (402) 471-2394
   - or
   - USDA APHIS PPQ, (402) 434-2345
   Officers from these agencies will collaborate to inspect the suspected ash tree and identify the specimen. NDA and APHIS may ask NFS to inspect the evidence if NDA and APHIS cannot do it quickly.
4. Deliver or send a collected specimen to:
   Plant & Pest Diagnostic Center
   448 Plant Science, East Campus
   University of Nebraska-Lincoln
   Lincoln, NE  68583-0722

5. If the collected specimen is initially confirmed to be emerald ash borer by a UNL identifier, the specimen will be sent to the National Systematic Entomology Laboratory to make the final identification:
   Systematic Entomology Laboratory
   ATTN: Communication and Taxonomic Services Unit
   Bldg 005, Rm 137
   BARC-West
   10300 Baltimore Ave
   Beltsville, MD 20705

6. Working Group members are notified that a suspect emerald ash borer is in the system for identification. However, at this point, **NO** information is for public dissemination.

7. The result, either positive or negative for EAB, is received from the Systematic Entomology Laboratory and Working Group members are notified.

IV. CONTAIN AND MANAGE EAB INFESTATIONS – the Administrative Team with the affected local governments and landowners will implement coordinated efforts to contain the infestation under the leadership of NDA and APHIS

A. **APHIS and NDA will take the lead**, in cooperation with NFS, in planning and implementing actions.

   1. Begin collaborative response with affected county and city governments and landowners
      a) Schedule an emergency meeting with government representatives and landowners of affected areas
      b) Discuss and determine a preliminary plan of action
      c) Release verified and accurate information to the press (Main Public Information Officer will be designated in the Incident Command System that will initially be put in place)

   2. NDA and USDA-APHIS-PPQ conduct a thorough delimiting survey, including destructively sampling symptomless trees, to determine the extent of the infestation.

   3. NDA places into effect an Emerald Ash Borer State Interior Quarantine regulating all potential host material (ash wood and ash wood products) within the quarantined area as determined by the delimiting survey. This would include the “declaration of all plants and
parts thereof infested with the emerald ash borer as a nuisance in the State of Nebraska” as well as the establishment of a formal quarantine of the infested areas.

4. NDA and APHIS determine the original source of the EAB infestation in the state to help locate other possible infestations and prevent future ones

5. Reference APHIS State Plant Health Director’s Emergency Plant Health Management Plan based on incident command.

6. Regulatory or control activities will be initiated as follows:
   a) Administer provisional quarantines
   b) NDA may require removal of all ash trees (both infested and not infested) up to ½ mile from the infestation, or other distance as deemed necessary, to attempt to eradicate an early and isolated infestation
   c) For all infestations except those that fall under “b)” above, the Administrative Team will meet promptly with designated representatives of affected municipalities or landowners to discuss options for managing the infestation. The options currently include:
      i) Remove all ash trees (both infested and non-infested) up to ½ mile from the infestation or the distance currently eligible for federal or state assistance
      ii) Remove only the trees known to be infested
      iii) Remove the trees known to be infested and treat trees within a prescribed area with approved insecticide applications to kill unknown infestations
   d) Municipalities and landowners shall be allowed to act under their own local authorities when local ordinances are applicable and consistent with NDA quarantine requirements

B. Communicate information and updates

1. Provide accurate information and updates to the media [Core Communications Team]

2. Provide accurate information to affected residents [Public Education Team]
   a) Have an informational door-hanger ready for customizing and distributing to affected area immediately after infestation is found
   b) Host local resident meetings or visit affected residents to share information as soon as possible after finding an infestation

3. Communicate with public and industry professionals to foster cooperation to maximize effective response [Public Education Team]

C. Dispose of wood debris by establishing processing facilities/marshalling yards in the quarantine zones to efficiently handle ash debris and reclaim useable products as much as possible [Administrative Team and Wood Utilization Team]

D. Develop and implement a community forest replanting program authorized under applicable federal, state and local authorities using available resources [Working Group]
1. Identify key state-wide cooperators for the development and implementation of reforestation programs and community projects

2. Coordinate all activities where possible with existing and on-going programs including:
   a) ReTree Nebraska Initiative
   b) Cost-share programs including:
      • Community Enhancement Program (CEP administered by NFS)
      • Trees for Nebraska Towns (TNT administered by NSA)
   c) Establish legislative support to re-establish and expand funding for the Nebraska Tree Recovery Act
   d) Seek legislative support to reduce risk and secure funding for prevention, control and recovery efforts.
Appendix A

Nebraska Timeline for Emerald Ash Borer (EAB) Activities

April 2003    Nebraska Department of Agriculture (NDA) begins visual surveys for EAB in ash nursery stock during nursery dealer and grower inspections.

November 2003 Nebraska Forest Service (NFS) discusses EAB with the public for the first time at a workshop.

August 2004    NFS surveys for EAB in ash trees around nurseries.

October 2005  Julie Van Meter, NDA State Survey Coordinator, attends EAB meeting in Novi, MI. NDA develops EAB dedicated tabletop display unit and Nebraska EAB handouts for outreach use.

March 28, 2006 First organizational meeting of Nebraska Emerald Ash Borer Working Group (Representatives from USDA/APHIS/PPQ; NDA; NFS, UNL Dept. of Entomology).

April 2006    Great Plains Tree Pest Council Meeting hosted in Lincoln, NE-EAB discussions.

June 2006     NFS begins annual EAB surveys.

September 2006 NFS develops “Wanted: Dead or Alive Emerald Ash Borer” pamphlets.

September 8, 2006 NE EAB Working Group meets and membership expands to include UNL Dept. of Agronomy and Horticulture; NNLA; NSA; NAA; Lincoln Parks and Recreation; Nebraska Game and Parks Commission; USDA Forest Service and Natural Resources Conservation Service (NRCS). Working group continues to meet monthly.

September 19-20, 2006 NDA employees: Julie Van Meter, Jessica Schueth, and Kathleen Pratt attend EAB Clinic in Brighton, MI.

November 2006   NDA begins conducting firewood inspections.

January 2007    Nebraska Statewide Arboretum and Nebraska Forest Service announce no funding of ash in grant projects.
March 2007  Nebraska Nursery and Landscape Association position statement released-Potential of EAB in Nebraska.

April 2007  Firewood recall situation involving Taylor Wood Products (IL).

April 2007  ReTree Nebraska 10-year Cooperative Initiative begins.

May 29, 2007  USDA/APHIS/PPQ, NDA, and UNL Dept. of Entomology participated in NPDN Exercise testing EAB specimen submission communication chain.

June 27, 2007  USDA/APHIS/PPQ and NDA participate in ash bark peeling exercise practice.

July 9, 2007  NFS position statement released, NFS no longer recommends ash for planting in Nebraska.

July 12, 2007  NRCS agrees with NFS position statement.

August 9, 2007  NE EAB Working Group Meeting, Craig Kellogg, Program Director, EAB Program-Brighton, MI in attendance.

August 10, 2007  Nebraska Arborists Association Summer Field Day, Craig Kellogg, Program Director, EAB Program-Brighton, MI presents EAB information to Nebraska Arborists.

September 19-20, 2007  USDA/APHIS/PPQ NE SPHD Vicki Wohlers attends EAB Clinic Training in Brighton, MI.

October 4, 2007  Great Plains Tree and Forest Invasives Initiative $500,000 grant received by NFS and state forestry agencies of North Dakota, South Dakota, and Kansas to conduct ash inventories in urban and rural areas and coordinate EAB educational and management efforts.

January 2008  Lowe’s planter product recall involving Lawson’s Wood Products (IN).

April 2008  The Nebraska Forest Service began producing and distributing EAB detection kits to encourage and facilitate citizen involvement in EAB monitoring.

May-September 2008  The Nebraska Department of Agriculture in cooperation with USDA-APHIS-PPQ, set 138 purple panel EAB detection traps at 50 high risk introduction sites as part of the 2008 National EAB Survey.
